TOMITA KEIKO(54) **HOSIERY FOR BASE PART OF FOOT FINGER**

(57) Abstract:

PROBLEM TO BE SOLVED: To obtain hosiery for base parts of foot fingers having effects on prevention and treatment of mustiness of a foot or athlete's foot in not only a shape but also a material itself without being distinguishable from the outside even in a mounted state.

SOLUTION: This hosiery for base parts of foot fingers 2 comprises a finger fitting part 3, capable of separately housing foot fingers 2 and prepared by cutting the tips and a foot mounting part 6, connected to the finger fitting part 3, cutting the heel part and making the instep part 13 of the foot in a state of wearing a shoe invisible from the outside and at least a part of the foot mounting part 6 and the finger fitting part 3 is preferably composed of platinum fibers. Thereby, the tips of the foot fingers 2 are exposed to prevent mustiness from occurring and the hosiery is invisible from the outside even when shoes are worn. A malodor due to the mustiness is prevented from emitting and the propagation of athlete's foot is suppressed by the

quick-drying properties and antimicrobial activities which are characteristics of the platinum fibers.
